Citation:

ADuanmu, H., "Clinical Report of 18 Cases of Infant Amniotic Fluid Aspiration Pneumonia Treated with Foot Massotherapy." 1996 China Reflexology Symposium Report, Beijing : China Reflexology Association, pages 15-16.

Synopsis:

18 cases of infants with pneumonia caused by amniotic fluid aspiration, were treated with foot reflexology two times a day for 3-7 sessions. Those who had a longer history were also given antibiotics. Results: symptoms in all 18 cases disappeared.

Conclusion:

Foot reflexology was found to be effective in the relief of the symptoms of amniotic fluid aspiration pneumonia.
