Yang, G., Ma, D., and Ma, S., "Clinical Trial of the Checkup of Foot Reflex Zone for Liver--Analysis of 600 Cases." 1994 China Reflexology Symposium Report, Beijing : China Reflexology Association, pages 160-162.

**Synopsis:**

600 patients with liver conditions were given foot reflexology with a success rate of 95%. Of 354 cases, with bone and muscular illnesses, 98.3% were relieved showing a close relationship between liver and the bone and muscular system. The researcher's found that most patients with various types of diseases had positive results from reflexology for the liver, indicating a relationship between liver conditions and other diseases.

**Conclusion:**

Reflexology was found to be effective for identification of liver conditions.
